1.

What is Holo and Hue

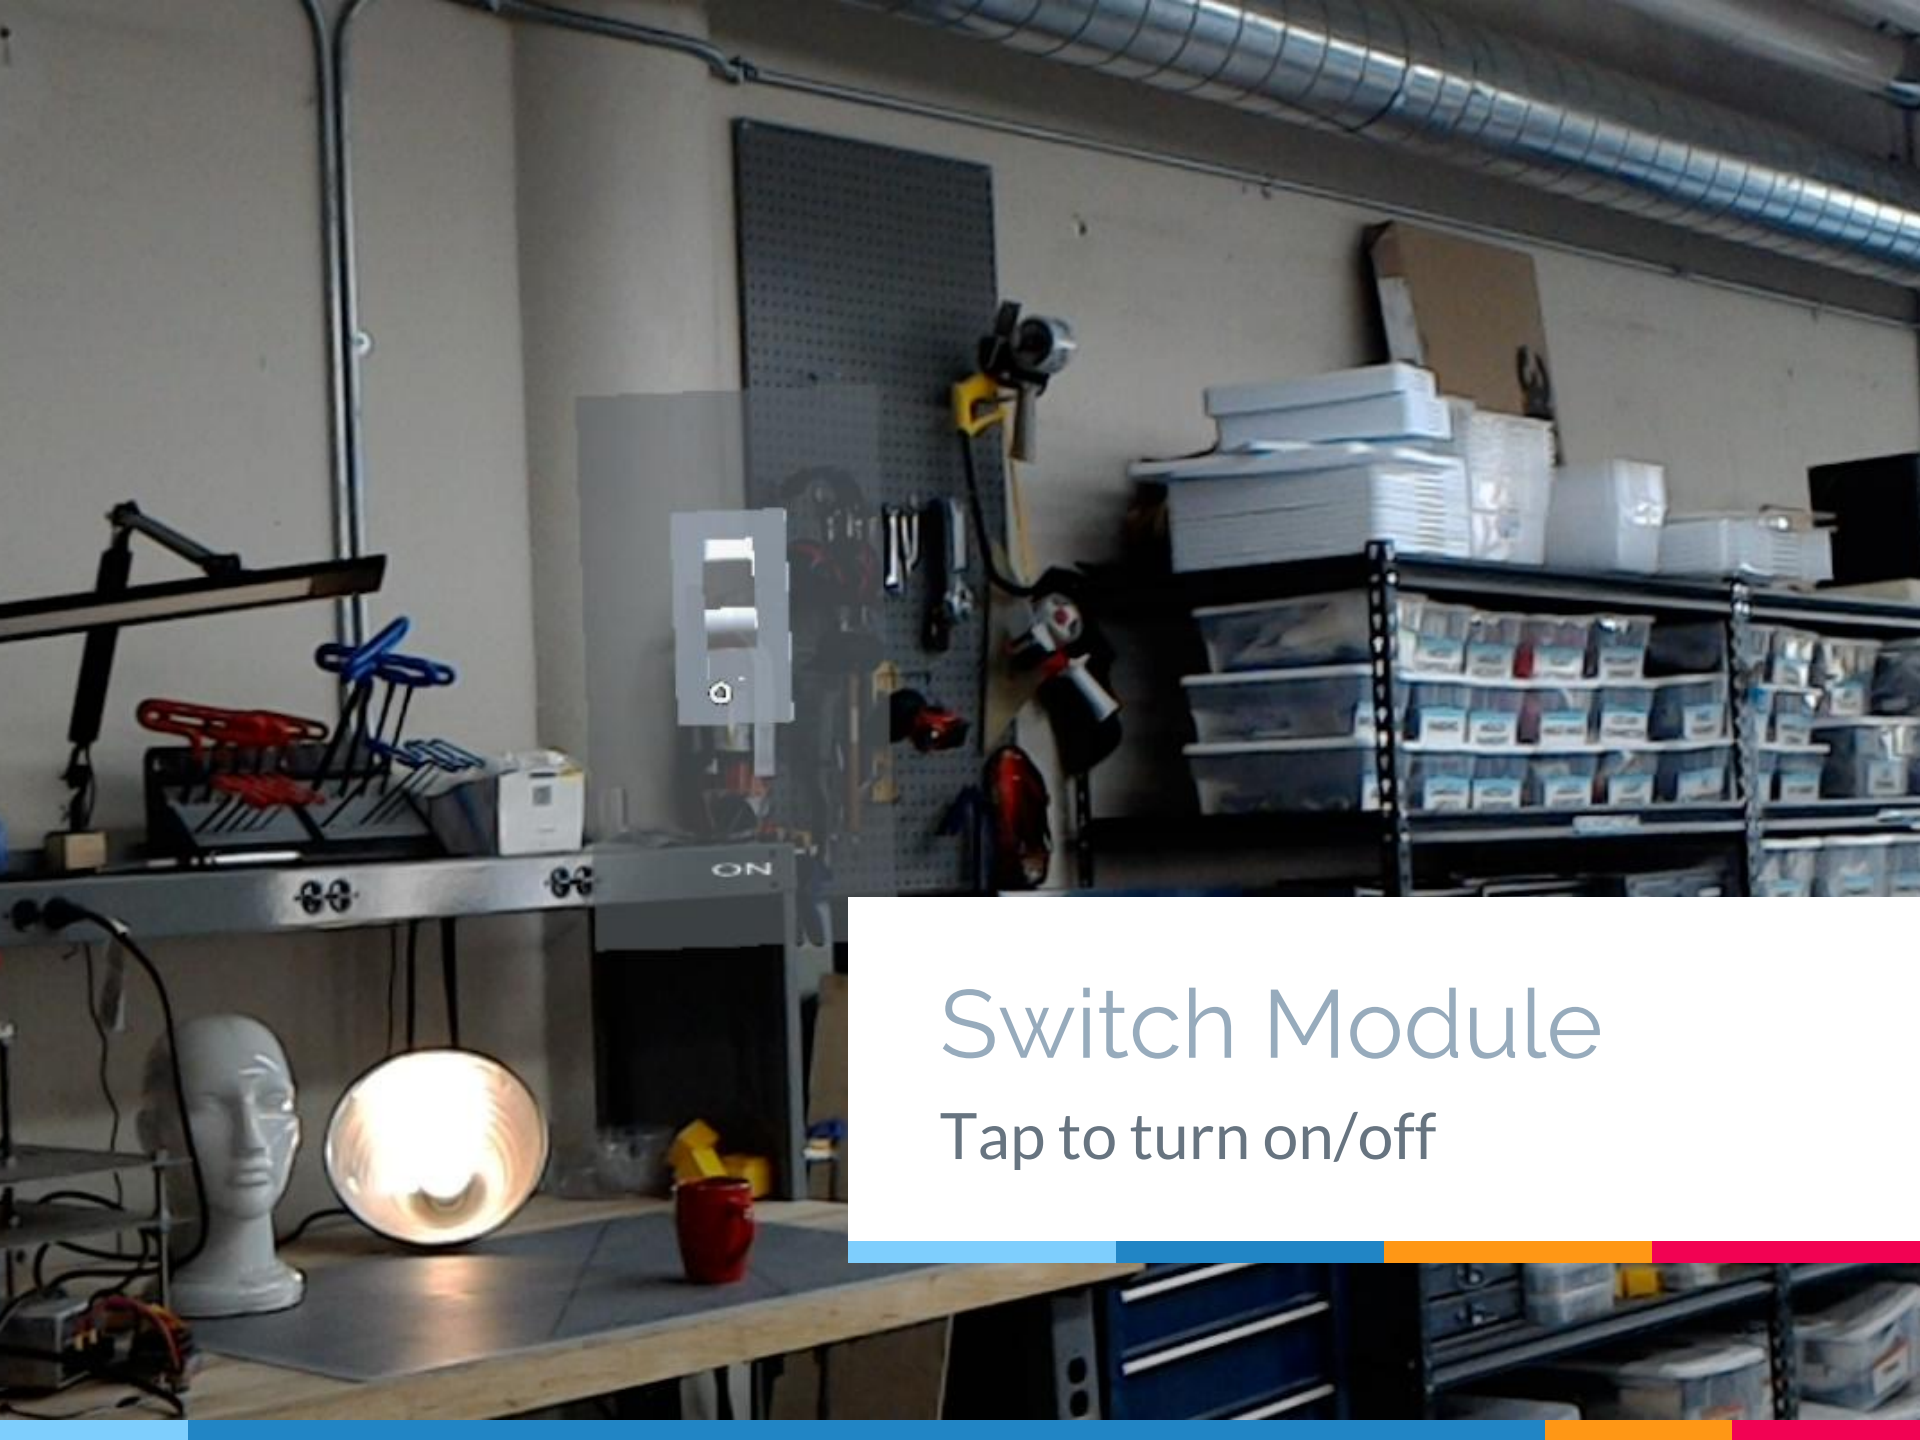
“

Holo and Hue is a Hololens application that utilize your space, including your location and surrounding environment, to control a Philips Hue

2.

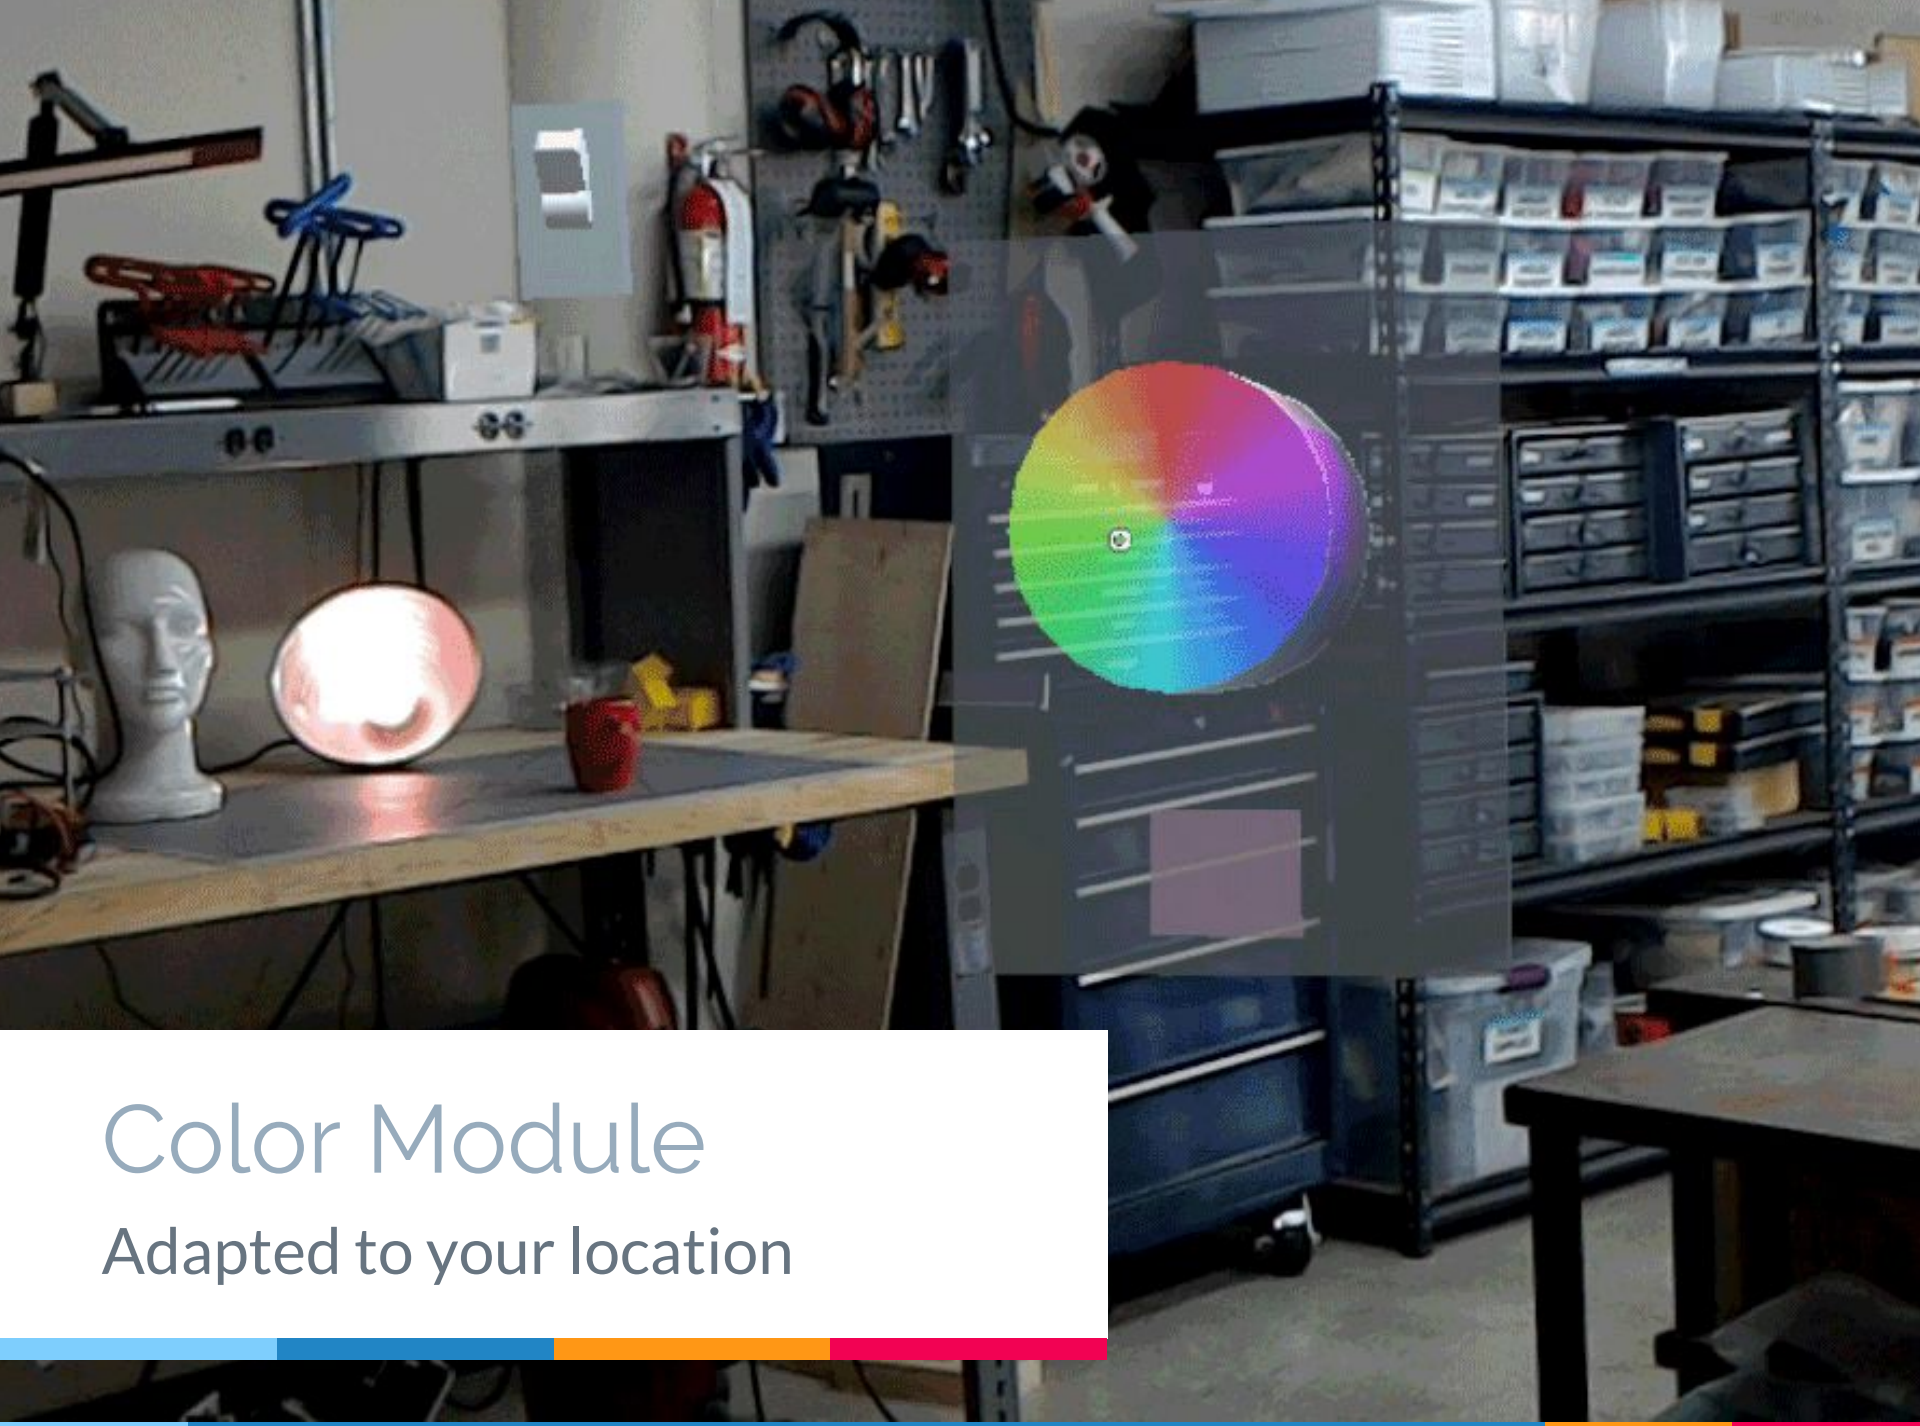
Demo

Let’s see it real time!



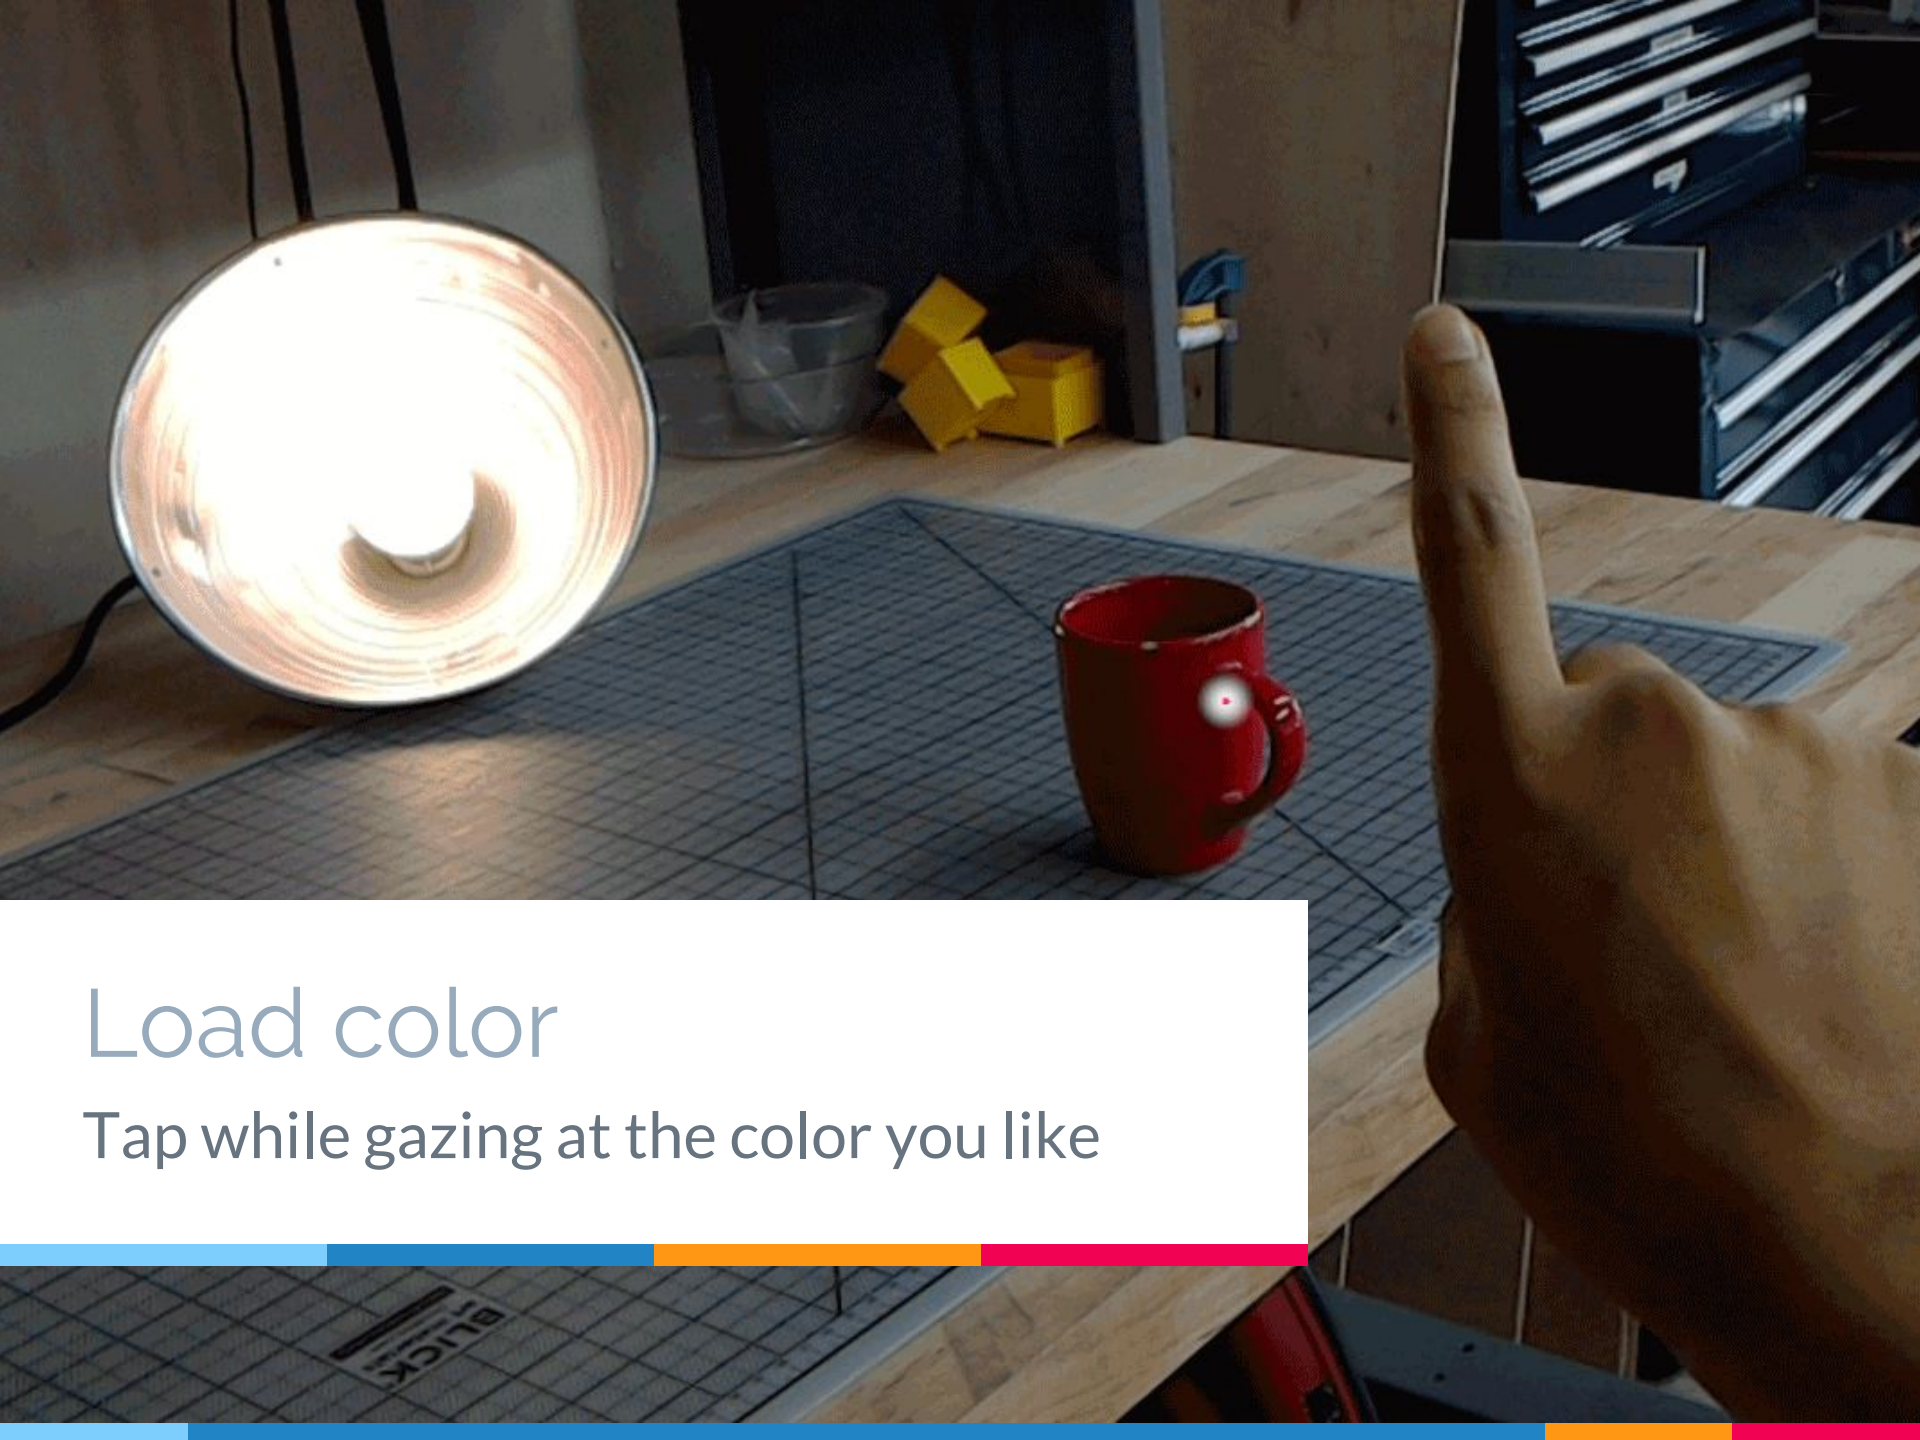
Switch Module

Tap to turn on/off



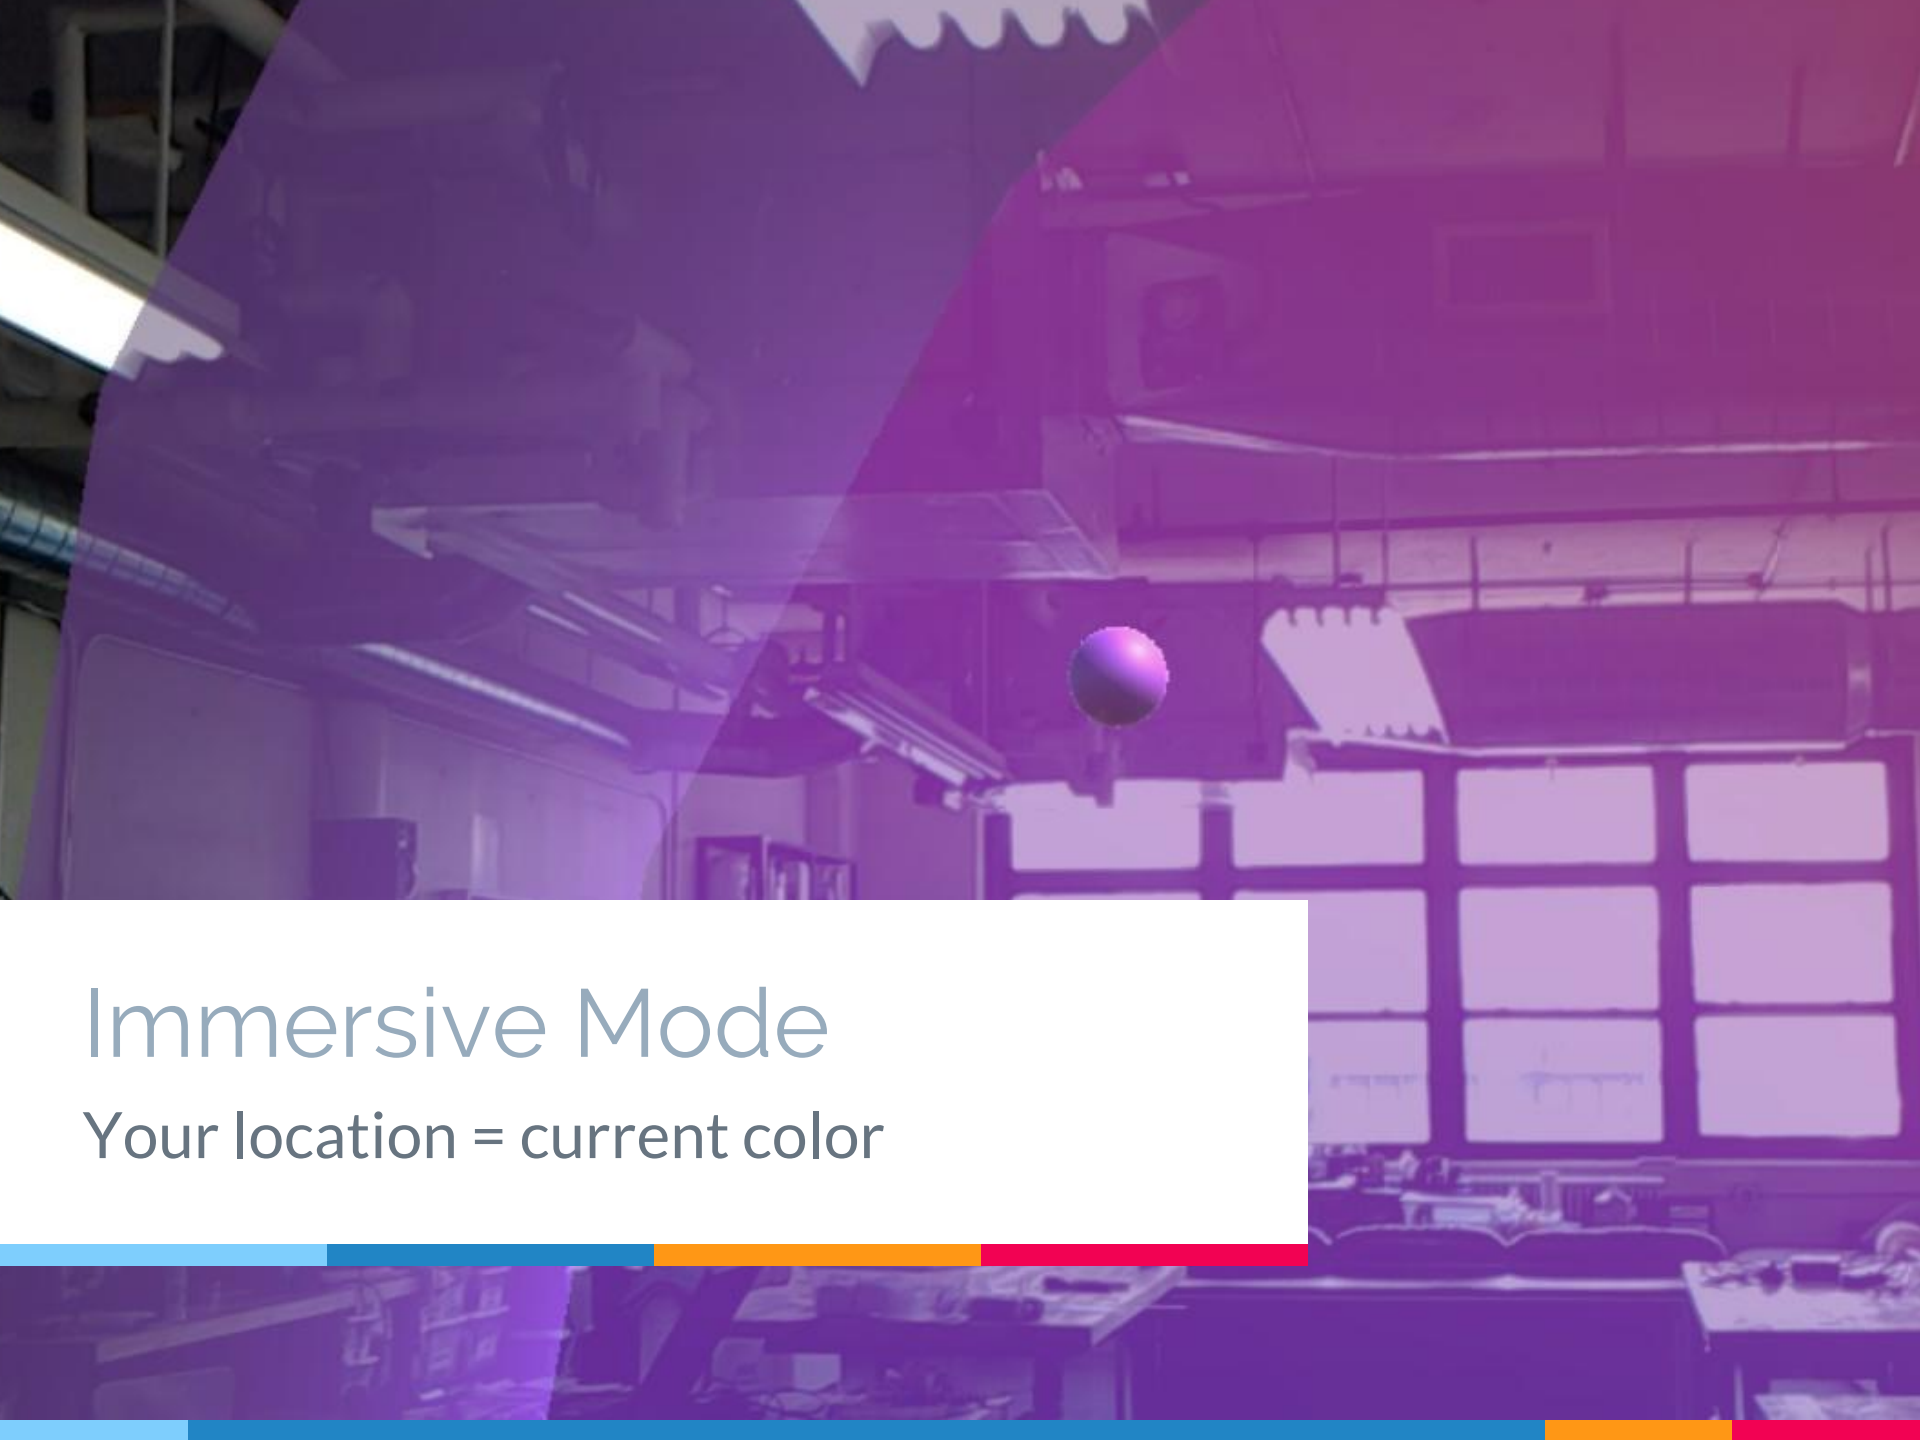
Color Module

Adapted to your location



Load color

Tap while gazing at the color you like



Immersive Mode

Your location = current color

3.
Why

Why did I choose this design approach

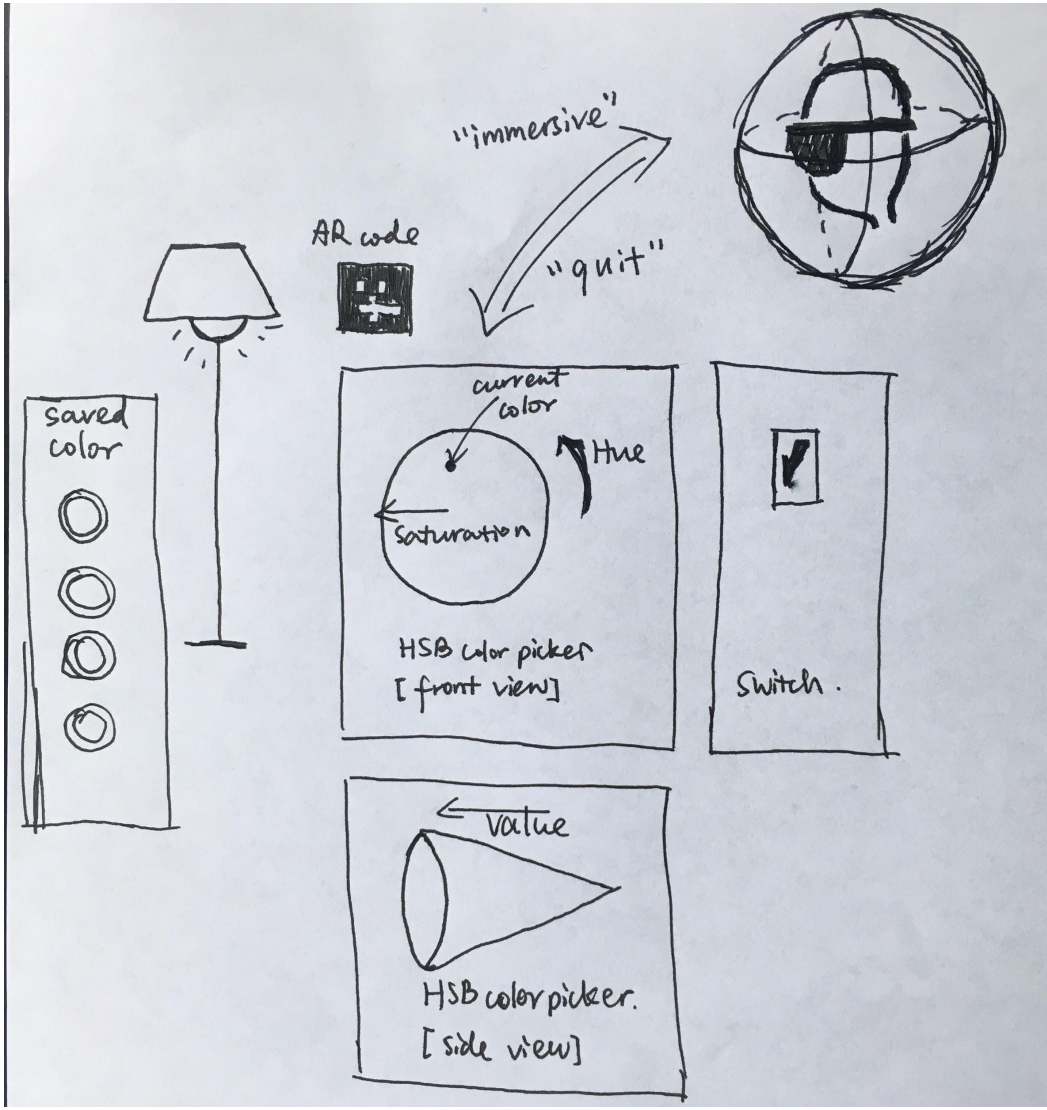
Hololens v.s. Phone screen

- 3D environment
- Gestures
- Location tracking
- Easy access to surrounding environment

- 2D environment
- Click, drag
- ARKit?
- “This app wants to access your camera”

What's special

- Your location in the space
- Your surrounding environment



4.
What's next

Variations and possible applications

- Multiple light, with spatial mapping and memory
- Combination with Vuforia
- Customized gesture

- On stage performance
-

Thanks!
